## What happened to the locale setting?

Written by Administrator Wednesday, 06 August 2008 16:47 - Last Updated Wednesday, 06 August 2008 16:47

This is now defined in the Language [lang].xml file in the Language metadata settings. If you are having locale problems such as dates do not appear in your language for example, <a href="mailto:nurse">nurse</a>

you might want to check/edit the entries in the locale tag. Note that multiple locale strings can be set and the host will usually accept the first one recognised.
